

SAND BINDER JETTING · FOUNDRY

CH Leading L251510 — full-size foundry molds and cores, straight from CAD.

The largest sand printer in the line — full engine blocks and heavy castings in a single build. Binder jetting prints the mold and cores directly — no patterns, no coreboxes, no machining.

BUILD BOX 2500 × 1500 × 1000 MM

COMPLETE PRODUCTION LINE

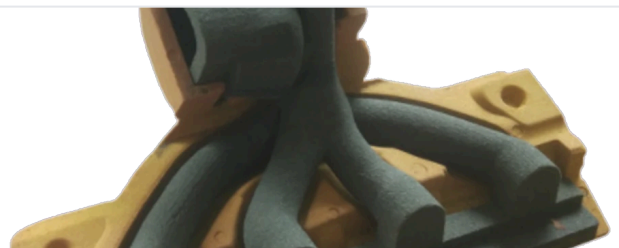

- **L251510 printer** — 4 printheads, high-speed configuration
- **Automatic sand mixer** — dosing of sand and curing agent
- **Sandbox conveyor and sand cleaning station**
- **Old-sand reclamation** — collected sand returns to the loop
- **Slicing, machine control and PLC software** included
- Options: VOC treatment, coating machine, drying box, AGV line

MATERIALS & PROCESS

- **Sands:** silica (quartz), ceramic, cerabeads, CB sand
- **Binder:** nitrogen-free furan, or inorganic. Phenolic is not recommended — it shortens printhead life
- **Layer thickness:** 0.2–0.6 mm adjustable
- **Print resolution:** 300×400 / 400×400 DPI
- **Full build box:** ≈7–18 h depending on configuration
- **Repeat positioning:** ≤0.02 mm on X, Y and Z

Engine block cores — a full core package printed in one build

Exhaust manifold core — thin-wall geometry without tooling

Have a casting drawing? Have a quote in 24h.

Install, commissioning and operator training included. Configured to your foundry: binder system, print speed, sand recovery. Leasing and financing available.
